

Job Title: **AI Engineer** (4 - 6 Years Experience)

Location: Gurugram - Sector 33 (Onsite - 5 Days a Week)

Shift Time: 12:30 pm IST to 9:30 pm IST

Summary of Responsibilities:

We are building a next-generation conversational AI platform (voice and text). We are looking for an engineer with strong hands-on experience in Python and modern AI systems.

Responsibilities by Function:

- Build, optimize, and maintain LLM-powered features, including RAG pipelines and agentic workflows.
- Develop backend services using FastAPI and integrate multiple LLM providers.
- Work with Pipecat for voice pipelines and real-time conversational systems.
- Analyze data, identify gaps, and implement improvements to model quality and system performance.
- Collaborate with product and engineering teams to ship reliable, production-ready AI features.

Qualifications:

- 4–6 years of experience in Python software engineering.
- Strong practical experience with LLMs, RAG, embeddings, vector stores, and agentic AI.
- Experience building APIs/services using FastAPI.
- Experience with voice/real-time systems or Pipecat is a plus.
- Ability to evaluate data pipelines, debug issues, and make data-driven improvements.
- Solid understanding of software engineering best practices and production deployment.
